

*"Making your home warm and cosy"*

## Choosing the right windows and doors for your home.

You'll want your windows to not only look the part, you'll want them to be as functional as possible too. With this in mind, we have produced this useful style guide to help you choose the right windows and doors for your home.

Choosing a window style can enhance the look and value of your property, so think carefully about window proportions and number of openings needed.

## Energy Efficient Windows

Energy efficient windows have substantially transformed the energy efficiency of residential homes in the last few years, and are proven to be one of the best ways to help lower your heating bills.

### How Do We Do It?

Energy rated windows feature advanced glass coating technology that reflects radiated heat back into the room, rather than allowing it to escape through the glass. At the same time it innovatively captures warmth from natural daylight by allowing it to pass through the glass.

In addition to high tech glass. Our double glazed A-Rated units are filled with argon gas which is 30% more effective than common air filled units. They also feature warm edge spacer bars which are far more efficient than aluminium.

Energy efficient windows can reduce condensation by over 80% meaning less risk of mould build up which is a common cause of respiratory illnesses.

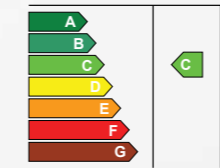

*“Up to 26% of heat loss in a home escapes through a window, so it’s clear to see why A-Rated windows and doors are becoming so popular”.*

Before: Red indicates substantial heat loss through old windows.

After: Red patches are eliminated thanks to thermal glass meaning your home is retaining the heat.

### Energy Rating

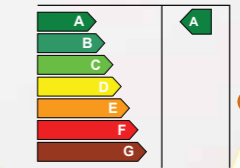

### Specific to C-Rated **C**

**1: Standard Float Glass**  
Standard Float Glass meets the requirements for C-Rated windows, making it a popular glazing choice.

**2: Aluminium Spacer Bar**  
The hollow aluminium spacer bar separates the two glass panes in a double glazed window.

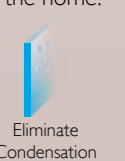

### Energy Rating

### Specific to A-Rated **A**

**1: Low Iron Glass**  
Crystal clear Low Iron Glass, when combined with Low-E Glass, provides a window with perfect clarity and exceptional thermal performance.

**2: Warm Edge Spacer Bar**  
A large amount of heat is lost around the edge of the glass where the unit is joined. Using a warm edge spacer bar rather than aluminium means more heat is retained in the home.

### Standard Across C-Rated & A-Rated Windows

**3: 5 Chambered Profiles**  
Having 5 chambers in our profile means it's not only extremely strong, it's also more thermally efficient as it provides air pockets for warm air.

**4: Double Weather Seal**  
Provides a weather tight and draft proof seal from the outside.

**5: Internally Beaded**  
Provides a secure burglar proof method of glazing a window from the inside.

**6: Argon Gas Filled**  
Double glazed units filled with argon gas are much more efficient, as argon is less thermally conductive than air meaning less heat is lost.

**7: Soft Coat Glass**  
An innovative invisible coating on soft coat glass massively reduces heat loss and almost eliminates condensation over and above what hard coat glass can achieve.
